

Module Summary

Flutter Fundamentals

- Compose UI from built-in and custom Widgets
- Custom Widgets are also composed from built-in and other custom Widgets
- Style and configure via arguments
- Use the docs & IDE support!

Styling & Configuring Widgets

- Styling & layout options are very different: `EdgeInsets.all()`, `BoxDecoration()`, `enums`, ... => Docs + IDE support help you
- Often, there's more than one Widget or option to get the job done

Theming

- Define a global theme for colors and text to then tap into it from anywhere in the app via `Theme.of(context)`
- Built-in Widgets use Theme settings automatically

Business Logic

- Lift state up and use stateful widgets only when needed
- Pass functions references and data around
- Adjust the UI to your logic
